ID4me

ID4me Milestones 2019

THE PROBLEM:

- ⊘ In 2016, the average user has at least 90 online accounts

- ⊘ The way the trend is headed, the number of accounts we use is growing at a 14% rate, meaning it doubles every 5 years.

- ⊘ In 2020, the average number of accounts per Internet user will be 207!

- ⊘ Are you ready to remember 207 login and password combos?

THE CONSEQUENCE

- *86% of users leave a site before creating a new account*

- *90% leave a service if password has been forgotten*

- *40% forgot password at least once a month*

- *86% admitted they have lied in a sign-up form*

MARCH : MAILBOX.ORG PROVIDES USERS ID4me LOGIN

Mailbox.org supports ID4me: Mailbox.org provides their users the privacy-friendly ID4me login

Posted March 21, 2019

Mailbox.org announced today to be the first e-mail provider to offer their users the login with our open and privacy-friendly Single-Sign on.

We are thrilled about how fast Mailbox.org has been moving forward offering their users the ID4me Login in their latest release.

Mailbox.org is not only one of the most innovative e-mail providers in Europe, they value their users privacy and security, yet the philosophy of the mail provider is very much align with the governance of ID4me: We believe in an open and trustworthy internet. With mailbox.org people and businesses are in control of their data and benefit from a high security standard.

Mailbox.org already announced in November 2018, that their number of customers has increased by about 40 percent over the last three years.

APRIL 17,2019 : 2nd HEG BLOG INTERVIEW

Die ID4me-Plugin Fiesta – ID4me-Hackathon CloudFest 2019 – Interview mit Katja Speck

Posted on 17. April 2019 by Wolf-Dieter Fiege

ID4me-Protokoll ist eine datenschutzfreundliche Alternative zu Social Media. Der Nutzer behält hierbei stehts die volle Kontrolle über seine Daten. (Weitere Informationen hierzu finden Sie in unserem Beitrag: Was unterscheidet ID4me von klassischen Social Media Logins wie Facebook oder Google?)

Wie einfach und schnell sich ID4me zum Beispiel mit CMS- und Administrations-Tools nutzen lässt, das darzustellen, war das Ziel eines Hackathons, den ID4me im Rahmen des diesjährigen Cloudfests veranstaltet hat. Über die Ergebnisse der ID4me Plugin Fiesta sprach Host Europe mit Katja Speck, der General Managerin von ID4me.

Host Europe: Wenn man einen Blick auf Eure neue Webseite wirft, stellt man fest, dass das ID4me-Projekt in den letzten Monaten zahlreiche neue Teilnehmer und namhafte Unterstützer gewinnen konnte. Pünktlich zum CloudFest habt Ihr den Beta-Lauch des ID4me Protokolls durchgeführt. Wie und wo wird ID4me aktuell schon genutzt?

Katja: Es freut uns sehr, dass wir bereits vor dem CloudFest einige neue Teilnehmer und Unterstützer gewinnen konnten und die Gespräche während des CloudFests waren sehr positiv.

Heute kann man ID4me bei mailbox.org, bei Open-Xchange, AndroidPIT und 1&1 IONOS nutzen. Anbieter wie InternetX, RankingCoach und CM4all und einige mehr, die ich noch nicht nennen darf, werden ID4me demnächst anbieten.

Nominees Identity innovation award 2019

Back to homepage

Click here for an overview of all news articles

ID4me, Schluss and iovation have been nominated for the identity innovation Award. The winner - with the best new innovation in the field of digital identity - will be announced at the annual IDnext event in The Hague on 25th September.

ID4me - ID4me is a Single Sign-On standard that allows users to get access to multiple sites with a single credential, and enables online providers remove friction from onboarding new customers. ***Katja Speck*** (General manager) of nominee ID4me: *"We are thrilled to being selected as one of the nominees for the identity innovation award as it confirms that our mission of a privacy-friendly login standard is on the right track. Looking at the list of previous winners and their impact within the identity world, we are very honoured. ID4me hopes too to further impact the fabric of the Internet in providing a privacy-friendly single-sign-on solution that gives End-users real choice and portability. At the same time we think we are also solving conversion and verification issues for the organisations that ultimately rely on the end-users' logins and interaction"*

ID4ME – THE IDENTITY LAYER THE INTERNET FOUNDERS FORGOT TO BUILD

Neal McPherson from 1&1 IONOS, on handing back control of data & identity management to the user through implementing the open ID4me single sign-on standard.

"As groundbreaking as a single sign-on service might be, it has to be embraced by users. Someone has to get the ball rolling, create added value and a network effect for ID4me. And this is exactly what we've set out to do."
Achim Weiss, CEO at 1&1 IONOS

SEPTEMBER 30 : DOMAINNAMEWIRE PODCAST

ID4ME and Domains – DNW Podcast #255

BY ANDREW ALLEMANN — SEPTEMBER 30, 2019 📁 PODCASTS 💬 5 COMMENTS

Can ID4ME boost both privacy and domain names?

This week I talk with Katja Speck and Tom Keller about ID4Me. Katja is the managing director of ID4Me, and Tom Keller is a board member whose day job is Head of Domains at 1&1 Ionos. The best way to think of ID4ME is an easy way to log into the websites, similar to signing in with Facebook or Google, while maintaining control over your data. (Of course, there's a lot more to it.) It's based on DNS, and Katja and Tom explain how it works and the benefits for the domain name ecosystem.
